

PERT Continuous

The Richards Corporation has the contract to produce a product that is illustrated in the following information. The customer has contacted Richards and, because of better than expected sales, wants to know what the chances are that the product will be available within 13 time periods.

Activity Completion Times

Act	Imm. Pred	Best Case	Most Likely	Worst Case	T_e	Standard Deviation
A	-	4	5	7		
B	A	1	3	5		
C	B	1	2	4		
D	-	3	4	10		
E	D	1	2	6		
F	E	3	5	8		

- a. Calculate the weighted average, T_e
- b. Calculate in the individual Standard Deviation for each activity
- c. Draw the diagram and determine paths.
- d. Determine the Path completion time based on T_e
- e. Determine the standard deviation for each path
- f. Determine the Zscore for each path, Z table attached
- g. What are the chances Richards will complete this project in 13 time periods?

Z Table

Z scores are found down the left column and across the top row.

Areas under the normal curve to the left tail are found in the body of the table.

Z	0.00	0.01	0.02	0.03	0.04	0.05	0.06	0.07	0.08	0.09
0.0	0.5000	0.5040	0.5080	0.5120	0.5160	0.5199	0.5239	0.5279	0.5319	0.5359
